

Four **Gases for Life** are hiding in this picture. And a green finger.

Dr. Monica Hermans, Messer Group GmbH, Manager Application Technology Chemistry/Environment.
Stefan Terkatz, Messer Industriegase GmbH, Manager Technical Service.

Messer produces and supplies industrial gases for all areas of everyday life. **Gases for Life** may be invisible, but they have no reason to hide. For example, old refrigerators are recycled in a safe and environmentally friendly way with the aid of nitrogen (**N₂**). Cryogenic liquid nitrogen is used for PVC recycling of garden hoses. In the treatment of wastewater, for example, carbon dioxide (**CO₂**)

replaces mineral acids. Drinking water can be treated with oxygen (**O₂**), ozone (**O₃**) and carbon dioxide. Paper can be bleached without using any chemicals whatsoever, except for ozone. In short: **Gases for Life** are natural products that render many chemical products superfluous and are kind to the environment. Further information can be easily found at www.messergroup.com or www.gasesforlife.de.
